

It is the policy and commitment of HPR ROV to implement, maintain and operate within a Quality Management System the provision of inspection, cleaning and maintenance solutions utilising Remotely Operated Vehicles (ROVs).

HPR's mission is to transform the cost, safety and carbon footprint of underwater inspection and light intervention, by combining advanced robotic technology, highly skilled personnel and data-driven insights.

It is my responsibility as Managing Director to ensure that our Quality Management System complies with all applicable Statutory and Regulatory requirements including the International Standard ISO 9001 and is communicated to and fully understood by all personnel.

Our quality objectives are established and reviewed throughout the year and discussed during Management Review Meetings.

The Quality Management System promotes Customer needs at all levels, through communication and feedback. We shall use this feedback together with regular internal measurement, to continually evaluate the suitability and effectiveness of our objectives, in terms of the quality, the context and the strategic direction of our business.

Continual improvement shall be a development goal of the Quality Management System, which shall be planned and based firmly on monitoring, audit, review, analysis and feedback, both internal and external.

HPR ROV is committed to providing solutions and services to our Customers and shall continue to promote a permanent, long term and reliable business environment, which is firmly based on:

- ***Realistic Commercial Competitiveness***
- ***Investment in our People***

Managing Director
